

Using technology to automate the education estate

With an increasing squeeze on funding, the education sector has never been under more pressure to do more with less, but could information gleaned from the lowly car park – an often-overlooked asset – hold the key to helping busy facilities teams meet ambitious cost, revenue and efficiency targets?

Unlock valuable insights, drive out time and cost through automation and delight users to achieve parking utopia – find out how.

ANPR big data can be repurposed to manage assets efficiently in the digital era, significantly reducing workloads on overstretched facility managers. Whether campuses are out-of-town or in the heart of buzzing urban centres, Smart data-led approaches can power better space allocation, permit processing and resource utilisation. ANPR-enabled parking solutions deliver optimum efficiency performance against targets, unlocking space turnover and car throughput.

ANPR also puts science behind your decisions, by understanding who's using the car park, how long they stay, and individual parking behaviours, whilst dramatically reducing parking violations by around 90% to virtually eradicate backlogs and provide better access to main buildings.

At a time when budgets are squeezed and ROI must deliver, free-flow parking can drive out cost by removing mechanically troublesome barriers and seriously automating back-office processes. A parking area deploying ANPR and electronic permits virtually takes care of its own admin, allowing estates teams to focus on immediate goals such as facility performance and cost efficiency KPIs.

Intelligent space-selling applications like Glyde Spaces can advertise unoccupied space during out-of-term time, or at less busy times identified by data generated from ANPR assets. This activates a margin-rich revenue stream for in-house teams, contributing much-needed breathing room in budget management and potential reinvestment.

Easily manage increased visitors for events/open days with flexible allocation and overspill management across parking zones. Automated permit allocation, easy-to-use waiting lists, blue badge management and a communications library for single/bulk notifications do all the hard work so you can get back to running a smooth site.

The BIG take-outs

Let go of the barrier - ANPR solutions serve to lower administration time inputs so it can be deployed in other areas. Free-flow sites allow 20% more cars to access your facility.

It is possible to monetise unused capacity during holidays or at weekends using book-in-advance space reselling. Do more with less; 42% of schools are letting buildings and facilities generate income to offset budget crunch.

ANPR technology has the power to lift parking-related revenues by up to 40%

One parking partner. Infinite possibilities.
