

Welcome to ParkEV

The way we drive and power vehicles in the UK is transforming, by 2030 there will be millions of electric vehicles on British roads and the way we park, recharge and drive will change.

That change doesn't need to be complicated.

ParkeV is our way of supporting the necessary changes to EV infrastructure in the UK, providing electric vehicle charging and enforcement that ensures bays are used by the people who need them and that the whole process for accessing charging is as seamless and simple as possible.

What is ParkEV?

ParkeV uses Evology electric vehicle chargers with an enforcement solution that aims to transform the landscape of EV parking in the UK.

Through our combination of technology and car park insight we're able to make your business's adoption of EV much more effective, not only for you, but for the motorists using your site.

As part of this, we've created a fast, effective, and reliable charging solution, using Evology chargers, that allows businesses to provide their customers with access to charging points that work, offering rapid charging, easy payment and unmatched reliability and uptime.

Our solution is based around 5 key points:

1

A data-driven approach

We're able to calculate the exact number of electric vehicles using your site and help you provide the right number of charging spaces to cater to your visitors' needs.

2

Hassle-free charging

From the installation, to how your visitors use the system, every aspect of ParkeV is designed with simplicity in mind.

3

We ease range anxiety

Naturally there are concerns about how far a car can go on a single charge. Access to bays isn't enough; the public needs to be confident that when they arrive at a space the charger will be working. We ease that fear with 24/7 monitoring, remote diagnostics and a proactive approach to maintenance that ensures our bays are always functional.

4

Easy to use

While apps are the norm with EV charging bays, we wanted to make sure that motorists didn't need to go through lots of additional steps to charge their vehicle. Our simple 'tap and go' method allows motorists to get on with their day quickly.

5

'Enforced' bay availability

There's nothing worse than a limited number of charging bays being blocked by non-electric vehicles using them. It frustrates everyone from the internal staff trying to find the vehicle owner, to the motorists who should be using that space. Our bay cameras allow us to identify abuse and keep those bays free for valid users.

How does it work?

ParkEV is a service that provides electric vehicle charging with several differences. When it comes to parking in an electric vehicle bay or paying for charging there are a couple of issues.

Much like with disabled parking bays or EV charging spaces access is vital. If someone who doesn't need to park in one of those bays is blocking access it creates issues for motorists with a legitimate need to use that space. This generates complaints for businesses that can be easily avoided.

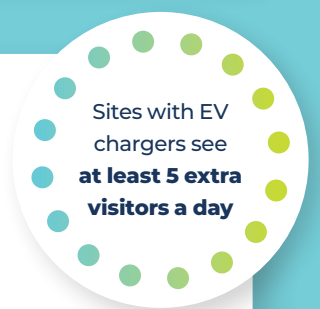

ParkEV does away with these problems. An ANPR camera housed within our charging station, or our monitoring bollard, helps to ensure that only electric vehicles use the chargers and don't overstay in the space. This means the bays remain available to those who need them.

When a visitor parks in a charging bay they just want to be able to plug in their vehicle and finish their journey. Some apps, payment portals and tools slow this process down making the whole experience of charging slower and less convenient.

While apps are a fantastic way to build loyalty and encourage return visits, we wanted to provide a way for visitors to pay and charge that was quick and simple. Our tap and go system allows someone to plug-in and carry on with their visit without any additional steps. They simply tap their card when they arrive to start charging and again when they return to their vehicle to finish and process payment.

How does ParkEV benefit you and your customers?

ParkEV can empower your car park, allowing your business to provide access to fast and reliable charging at no additional cost. By leveraging ANPR to keep spaces available we're able to reduce queues and parking complaints while removing any worry about access to charging for your guests.

By providing users of your car park with reliable charging facilities you're able to increase the time they spend on your site, boosting revenue and building loyalty. We use our powerful data and technology to make sure your charging solution stays operational and fit for purpose, with no extra admin or work for you, allowing you to provide access to new technology and services with complete peace of mind.

Motoring in the UK is changing, and the transformation into a nation that uses more sustainable and environmentally friendly ways of getting around starts with getting the best possible infrastructure in place.

This means high-speed, reliable, and readily available charging points that are easy to use. This means ParkeV.

To transform the way you approach parking, get in touch.
